Abstract

Karadelev, M., Rusevska, K. (2013). Contribution to Macedonian Red List of fungi. Proceedings of the 4th Congress of Ecologists of Macedonia with International Participation, Ohrid, 12-15 October 2012. Macedonian Ecological Society, Special issue 28, Skopje.

The paper provides information about the Red List of fungi in Macedonia where the current IUCN Red List categories are put into practice. It includes 213 species of Ascomycota and Basidiomycota. The following IUCN criteria were implemented: Critically Endangered, (CR) – 21 species, Endangered (EN) – 30 species, Vulnerable (VU) – 71 species, Near Threatened (NT) – 40 species, Least Concern (LC) – 9 species and Data Deficient (DD) – 42 species. The main goals of this work are to upgrade the Preliminary red list of macromycetes in the Republic of Macedonia (Karadelev, 2000), to improve fungal conservation status and to accelerate proposals for legal measures in order to conserve fungal diversity.

Key words: Macedonia, conservation of fungi, Red List.

Извод

Караделев, М., Русевска, К. (2013) Придонес кон црвената листа на габи на Република Македонија. Зборник на трудови од IV Конгрес на еколозите на Македонија со меѓународно учество, Охрид, 12-15 октомври 2012 година. Македонско еколошко друштво, посебно издание 28, Скопје.

Главната цел на овој труд е изработка на Црвена листа на габи на Македонија што ќе придонесе за забрзување на постапките за преземање легални мерки и заштита на микодиверзитетот во Македонија. Таа претставува дополнување на Прелиминарната црвена листа на габи на Македонија (Karadelev, 2000). Во оваа листа се наведени 213 вида кои припаѓаат на типовите Ascomycota и Basidiomycota. Видовите се категоризирани според критериумите на IUCN, при што во категоријата критично загрозувани (CR) има 21 вид, загрозувани (EN) – 30 вида, ранливи (VU) – 71 вид, близу засегнати (NT) – 40 вида, најмалку загрижувачки (LC) – 9 вида и недоволно податоци (DD) – 42 вида.

Клучни зборови: Македонија, заштита на габи, Црвена листа.

Introduction

Fungi are a large and an ecologically very important group of organisms. Like the majority of other organisms living on our planet, fungi may also be threatened by human activities. They are mostly endangered by the disappearance and degradation of habitats, but there are also other important causes of threat such as pollution, climate change and excessive gathering of fruiting bodies of edible species. The preparation of Red List of Macedonian Fungi is essential step in their conservation.

The Preliminary Red List of macromycetes in the Republic of Macedonia (Karadelev 2000) included 67 species, all belonging to class Basidiomycetes. In that list, three threat categories were applied – a particularly rare or rare species in Macedonia, a species existing only in endangered or rare habitats and a particularly rare or rare species, endangered due to excessive exploitation. Its main goals were to initiate an important research in fungal conservation and to accelerate proposals for legal measures in order to conserve fungal diversity.

Thus, the Macedonian mycobiota in the last

10 years was quite well investigated. These data enabled preparation of contemporary Red List of Macedonian Fungi, where the current IUCN Red List categories (IUCN 2001, 2003a, b) were used. Data source used are as follows: exsiccates and notes from own studies, Macedonian collection of Fungi (MCF), data base (MAK FUNGI),

as well as specimens from other collectors.

Macedonian Red List of Fungi (Table 1) includes the total of 213 species, both ascomycetes and basidiomycetes, as follows: 21 Critically Endangered (CR), 30 Endangered (EN), 71 Vulnerable (VU), 40 Near Threatened (NT), 9 Least Concern (LC) and 42 Data Deficient (DD).
